                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             망
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
The invention relates to an isolated nucleic acid fragment encoding a soybean myo-inositol 1-phosphate synthase, or a mutant myo-inositol 1-phosphate synthase having decreasing capacity for the synthesis for myo-inositol-1-phosphate. Also included are a chimeric gene (comprising the nucleic acid encoding soybean myo-inositol 1-phosphate synthase, its complement, subfragment or the complement of the subfragment, operably linked to suitable regulatory sequences, where expression of the chimeric gene results in a decrease in expression of an endogenous or native gene encoding a soybean myo-inositol 1-phosphate synthase), a soybean plant comprising the chimeric gene (with a heritable phenotype of a seed phytic acid content of less than 17 micromol/g, a seed content of raffinose plue stachyose of less than 14.5 micromol/g, and a seed sucrose content of greater than 200 micromol/g, provided that the plant is not LR33), seeds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel isolated nucleic acid fragment encoding soybean myo-inositol 1-phosphate synthase, useful for altering raffinose saccharide, sucrose phytic acid and inorganic phosphate content of soybean seeds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            08-APR-1997;

(c) (comprising crossing IR33 or the plant comprising the chimeric gene with

(c) an elite soybean plant and selecting a progeny plant of the cross of

(c) crossing step that has a heritable phenotype as mentioned above), seeds

(c) of soybean plant made by the above method, a soy protein product derived

(c) from seeds of a soybean plant (homozygous for one or more gene encoding a

(c) mutant myo-inositol 1-phosphate synthase having decreased capacity for

(c) the synthesis of myo-inositol 1-phosphate, where the gene confers a

(c) the synthesis of myo-inositol 1-phosphate, where the gene confers a

(c) the synthesis of myo-inositol 1-phosphate, where the gene confers a

(c) the synthesis of myo-inositol 1-phosphate, where the gene confers a

(c) the synthesis of myo-inositol 1-phosphate, where the gene confers a

(c) the synthesis of myo-inositol 1-phosphate seeds of a soybean plant with

(c) the synthesis of myo-inositol 1-phosphate seeds of a soybean plant with

(c) the synthesis of myo-inositol 1-phosphate seeds of a soybean plant with

(c) the synthesis of myo-inositol 1-phosphate seeds of a soybean plant with

(c) the synthesis of myo-inositol 1-phosphate seeds of high concentration of raffinose

(c) object of the synthesis (and other legumes) can lead to flatulence

(c) the synthesis of myo-inositol 1-phosphate synthesis

(c) the synthesis of myo-inositol 1-phosphate synthesis

(c) the synthesis of myo-inositol 1-phosphate synthesis of myo-inositol 1-phosphate synthesis

(c) the synthesis of myo-inositol 1-phosphate synthesis

(d) the synthesis of myo-inositol 1-phosphate synthesis

(d) the synthesis of myo-inositol 1-phosphate synthesis

(d) the synthe

The invention relates to a nucleic acid fragment encoding a soybean myo-
CC inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate
CC synthase having a decreased capacity for the synthesis of myo-inositol 1-
CC phosphate. The invention also relates to a chimeric gene operably linked
CC to suitable regulatory sequences, where expression of the chimeric gene
CC results in a decrease in expression of an endogenous or native gene
CC encoding a soybean myo-inositol 1-phosphate synthase, a soybean plant
CC comprising the chimeric gene, a method of making the soybean plant, a
CC seed of the soybean seeds, a method of making the soybean plant, a
CC seed of the soybean seeds, a method of finaling or producing a soy
CC protein product and a method of using a soybean plant homozygous for at
CC least one gene encoding a mutant myo-inositol 1-phosphate synthase having
CC decreased capacity for the synthesis of myo-inositol 1-phosphate with
CC decreased raffinose, stachyose and phytic acid content and increased
CC sucrose and inorganic phosphate content, leading to valuable and useful
CC soybean products. This sequence represents CDNA encoding a wild type
CC soybean myo-inositol 1-phosphate synthase polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (HITZ/) HITZ W D.

This is the nucleotide sequence of cDNA encoding the wild-type soybean myo-inositol 1-phosphate synthase (MI 1-PS) greent in clone p5bmi-lps (ATCC 97970). The clone was isolated from a cDNA library of soybean lir LR13 by hybridisation to a probe made from MI 1-PS cDNA of Arabidopsis thaliana. MI 1-PS is involved in glucose metabolism to phytic acid,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      raffinose and stachyose. A mutant MI 1-PS nucleic acid (see AAV62443) has been identified in soybean line LA33, a mutagenised line of low raffinose saccharide phenotype. Sequencing revealed a single base change mutation (G to T at base 1241) in the LR33 sequence. The mutation results in a seed phenotype of very low raffinose saccharide sugars, very high sucrose saccharide, sucrose, phytic acid and inorganic phosphate content of soybean seeds, leading to useful soybean products, e.g. a seed phytic acid content of less than 17 ug/g, a seed content of raffinose and stachyose combined of less than 14.5 ug/g, and a seed sucrose content greater than 200 ug/g. (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 1782

Soybean mutant myo-inositol 1-phosphate synthase cDNA

Soybean; myo-inositol 1-phosphate synthase; raffinose; phytic acid; ds.

Glycine max;

W09845448-A1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This is the nucleotide sequence of cDNA encoding a mutant soybean myo-
CC inositol 1-phosphate synthase (MI 1-PS) present in clone LR33-10. This
CC clone was isolated from a cDNA library of soybean line LR33 by PCR
CC amplification (see ANV6241-42). Line LR33 was obtained by chemical
CC mutagenesis of wild-type soybean genome and as a reduced raffinose
CC saccharide phenotype. MI 1-PS is involved in glucose metabolism to phytic
CC caid, raffinose and stachyose. Sequencing revealed a single base change
CC wild-type sequence (see ANV62440). The mutation results in a seed
CC wild-type sequence (see ANV62440). The mutation results in a seed
CC phenotype of very low raffinose saccharide sugars, very high sucrose and
CC low phytic acid. The mutated MI 1-PS nucleic acid is used to alter the
CC content of soybean seeds, leading to useful soybean products, e.g. a seed
CC content of less than 17 ug/g, a seed content of raffinose and
CC stachyose combined of less than 14.5 ug/g, and a seed sucrose content
CC greater than 200 ug/g. (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Soybean plants containing altered myo-inositol-1-phosphate gene - useful for generating plants with altered levels of e.g. raffinose, stachyose, phytic acid, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 1533
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    08-APR-1997;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    5
The invention relates to a nucleic acid fragment encoding a soybean myo-
ic inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate

Synthase having a decreased capacity for the synthesis of myo-inositol 1-
phosphate. The invention also relates to a chimeric gene operably linked
to suitable regulatory sequences, where expression of the chimeric gene
results in a decrease in expression of an endogenous or native gene
cencoding a soybean myo-inositol 1-phosphate synthase, a soybean plant
comprising the chimeric gene, a method of making the soybean plant, a
seed of the soybean plant, a soy protein product derived from the
processing of soybean seeds, a method of making the soybean plant of
processing of soybean seeds, a method of making the producing a soy
protein product and a method of using a soybean plant homozygous for at
least one gene encoding a mutant myo-inositol 1-phosphate synthase having
decreased capacity for the synthesis of myo-inositol 1-phosphate. The
nucleic acid fragment and methods are useful for producing plants with
                                                                                                                                                                                                                                                                 New nucleic acid fragment encoding myo-inositol 1-phosphate synthase, useful for producing plants with decreased raffinose, stachyose, and phytic acid and increased sucrose, leading to valuable and useful soybean
                                                                                                                                                                                                                           Claim 10; SEQ
                                                                                                                                                                                                                                                                                                                                                                                                                    (HITZ/)

The nucleic acid is useful for altering raffinose saccharide, sucrose, phytic acid and inorganic phosphate content of soybean seeds thus leading to valuable and useful soybean products, since the presence of high concentration of raffinose oligosaccharides in soy plants (and other legumes) can lead to flatulence when consumed by humans. The present sequence encodes a mutant myo-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The

following application of the salt stress (leaves: 2hr, 6hr, 12hr, 1d, 2d, and 4d; roots:2hr, 6hr, 12hr, and 2d). Set 2 were grown under the standard conditions and then were water stressed by withdrawal of further watering applications. Drought stressed plants were harvested after cessation of watering (leaves: 3d, 5d, and 7d; roots:3d and 5d). Set 3 were grown under the standard conditions and then were cold stressed by placement at 4 C. Cold stressed leaves were harvested at 2 hr, 6 hr, 12 hr, 1 d, and 4d and roots were harvested at 2 hr, 6 hr, 12 hr, 1 d, 2d. Set 4 were grown under the standard conditions and then were heat stressed by placement at 35 C. Heat stressed leaves were harvested at 2 hr, 6 hr, 12 hr, 1 d, and 4d and heat-stressed at 2 hr, 6 hr, 12 hr, 1 d, and 4d and heat-stressed roots were harvested at 6 hr, 12 hr, 1 d, and 4d and 4d. RNA was isolated from all tissues and equal RNA from each tissue and stress was pooled to construct the CDNA library. RNA sample."

supplier: Solanum tuberosum var. Kennebec plants were
grown from cuttings on a 16hr light/8 hr dark cycle at 25
C for 3-4 weeks. Abiotic stress conditions were applied to
four separate sets of plants. Set 1 involved saturation of
the soil with 150 mM NaCl and tissues were harvested at
following application of the salt stress (leaves: 2hr,
6hr, 12hr, 1d, 2d, and 4d; roots: hr, 6hr, 12hr, and 2d)
Set 2 were grown under the standard conditions and then
were water stressed by withdrawal of further watering
applications. Drought stressed plants were harvested after
cessation of watering (leaves: 3d, 3d, and 7d; roots: 3d
and 5d). Set 3 were grown under the standard conditions
and then were cold stressed by placement at 4 C. Cold

stressed leaves were harvested at 2 hr, 6 hr, 12 hr, 1 d, and 4d and roots were harvested at 2 hr, 6 hr, 12 hr, 1 d, 2d. Set 4 were grown under the standard conditions and then were heat stressed by placement at 35 C. Heat stressed leaves were harvested at 2 hr, 6 hr, 12 hr, 1 d, 2d and 4d and heat-stressed roots were harvested at 6 hr, 12 hr, 1 d, and 4d. RNA was isolated from all tissues and equal RNA from each tissue and stress was pooled to construct the cDNA library. RNA sample."

                                                                               /clone lib="portato abiotic stress cDNA library"
/clone="Wector: pCMVSport6.1; Site 1: EcoRI; Site 2: NotI;
supplier: Solanum tuberosum var. Kennebec plants were
grown from cuttings on a 16hr light/8 hr dark cycle at 25
C for 3-4 weeks. Abiotic stress conditions were applied to
four separate sets of plants. Set 1 involved saturation of
the soil with 150 mM NaCl and tissues were harvested at
following application of the salt stress (leaves: 2hr,
6hr, 12hr, 1d, 2d, and 4d; roots: 2hr, 6hr, 12hr, and 2d).
Set 2 were grown under the standard conditions and then
were water stressed by withdrawal of further watering
applications. Drought stressed plants were harvested after
cessation of watering (leaves: 3d, 5d, and 7d; roots: 3d
and 5d). Set 3 were grown under the standard conditions
and then were cold stressed by placement at 4 C. Cold
stressed leaves were harvested at 2 hr, 6 hr, 12 hr, 1 d,
2d. Set 4 were grown under the standard conditions and
then were heat stressed by placement at 35 C. Heat
stressed leaves were harvested at 3 hr, 6 hr, 12 hr, 1 d,
2d and 4d and heat-stressed roots were harvested at 5 hr, 6 hr, 12 hr, 1 d,
2d and 4d and heat-stressed at 3 hr, 6 hr, 12 hr, 1 d,
2d and 4d and heat-stressed series harvested at 6 hr,

12 hr, 1 d, and 4d. RNA was isolated from all tissues and
                                                  equal RNA from each tissue and stress was pooled to construct the cDNA library. RNA sample."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /mol

/note="Organ: Zygotic Embryo and Megagametophyte, Somatic
Embryo; Vector: pCMV-SPORT 6.1; Site 1: Not1; Site 2:
ECORV; tissue: Whole megagametophytes isolated from pine
seeds, Whole embryos excised from these megagametophytes,
whole somatic embryos and suspensor tissue from tissue
culture, isolated from cell line Al2 Pooled RNA from
zygotic embryos, megagametophytes, and somatic embryos was
used for library construction. Pine cones were harvested
weekly from open-pollinated 7-56 mother trees, collections
occurred from 7/01/02 until 10/15/02. Whole
megagametophytes were first isolated from pine seeds, and
whole embryos excised from these megagametophytes each was
flash frozen. Embryo development was assessed using the
system of Pullman et al (Pullman GS, Johnson S, Peter G,
Cairney J, Xu N. 2003. Loblolly Pine somatic
                                                                                                                                                                                                                                                                                                                                                                                           embryogenesis: development of a maturation medium and resulting embryo quality. Plant Cell Reports 21:747-758 (http://link.springer.de/link/service/journals/00299/conte nts/03/00586/). For photographs see Clavatta et al 2001. (Clavatta VT, Morillon R, Pullman GS, Chrispeels M, Cairney J. 2001. An aquaglyceroporin is abundantly expressed early in the development of the suspensor and the embryo proper of lobiolly pine (Pinus taeda L.). Plant physiol. 127: 1556-1567
